## 03 Day

swift 에서 enum 을 표현하는 방법들을 한번 모아보았습니다.

```
enum School {
    case elementary
    case middle
    case high
    // 아래와 같이 한 줄 표현 가능
      case elementary, middle, high
let yourSchool = School.elementary
print("yourSchool : \(yourSchool)")
enum Grade : Int {
                        값은 아메 갖는 상태.
    case first = 1
    case second = 2
let yourGrade = Grade second
print("yourGrade : \((yourGrade.rawValue)"))
enum SchoolDetail {
    case elementary(name: String)
    case middle(name: String)
    func get() -> String{
        case .elementary(let name):
            return name
        case .middle(let name):
            return name
let yourMiddleSchoolName = SchoolDetail.middle(name: "ppak-coders")
print("vourMiddleSchoolName : \(vourMiddleSchoolName.get())")
```
